Kane Denzil Quadras

Senior Software Engineer | React Native | Node.js | AWS

Toronto, ON | +1 (647) 822-2594 | Email | LinkedIn | GitHub | Portfolio

SUMMARY

Senior Software Engineer specializing in React Native and full-stack delivery across React, Node.js, and AWS. Builds cross-platform mobile applications alongside the web clients and services behind them - native module bridging, REST API design and integration, release pipelines, and cloud architecture. Recent work includes building the Chun Wo React Native application, prototyping with new AI models, shipping LLM features on Amazon Bedrock, and infrastructure changes that cut a project AWS bill by 77%. Works daily with AI coding tools and has led delivery teams of up to five across sports/media, fintech, healthcare, and enterprise.

TECHNICAL SKILLS

- **AI & LLM:** Amazon Bedrock (Nova), Amazon Transcribe, Amazon Polly, Ollama, Prompt Engineering, LLM cost modelling, multilingual speech/text pipelines
- **AI-Assisted Development:** Claude Code, Cursor, GitHub Copilot
- **Cloud:** AWS (Lambda, API Gateway, RDS, VPC/NAT, ElastiCache, Cognito, Secrets Manager), cross-region architecture, data residency, cost optimisation
- **Languages:** TypeScript, JavaScript, Swift, Kotlin, Dart, SQL
- **Mobile:** React Native, Expo, Swift, SwiftUI, UIKit, Flutter, CoreBluetooth, App Store, Play Store, TanStack Query, Zustand, React Context
- **Backend:** Node.js, REST, GraphQL, PostgreSQL
- **Testing Libraries:** Jest, React Native Testing Library, XCTest
- **Build & Release:** GitHub Actions, Bitrise, Fastlane, EAS Build, EAS Update (OTA), TestFlight, Firebase App Distribution, Turborepo, pnpm, Jira, Confluence, Datadog, Sentry

WORK EXPERIENCE

Senior Associate Engineer, Full Stack

Feb 2026 – Present

Appnovation Technologies, Toronto, Ontario, Canada

Project: Chun Wo (Construction Workforce Management Apps) — React Native (TypeScript), React, Node.js, AWS

- Built core platform features end to end across a React Native/Expo mobile app, a separate React web app, and the Node.js services behind both - account creation, worker registration (in-app and via WhatsApp), job posting, and job offering and scheduling - where site managers coordinate foremen and workers.
- Built the client-side data and state layer with TanStack Query, Zustand, and React Context, and shipped reusable components and feature modules shared across screens; added English and Traditional Chinese localization, accessibility improvements, and structured error handling.
- Designed the AWS architecture for the platform's WhatsApp AI assistant - an LLM voice and text feature on Amazon Bedrock (Nova), Transcribe, and Polly serving foremen and workers in English and Traditional Chinese across five roles.
- Found by direct CLI testing that Cantonese speech synthesis and real-time transcription were unavailable in the Hong Kong region despite the documentation, then designed a cross-region split that met latency targets without moving worker data out of Hong Kong.

- Rebuilt the feature cost model after identifying a **~60x understatement** in the prior estimate; delivered the engineering document and executive one-pager adopted by the client, showing voice accounts for ~89% of the projected bill.
- Cut the project AWS bill from **$291 to $66 per month** a **77% reduction**, roughly $2,700 per year - with no loss of functionality, by replacing a managed NAT Gateway with a self-hosted NAT instance, routing AWS API traffic through it so paid PrivateLink endpoints became unnecessary, and dropping an unneeded Redis cluster.
- Moved a shared plaintext database master credential onto AWS Secrets Manager with a least-privilege role, fixed connection-pool exhaustion (max 10 to 1 per Lambda container), and tightened RDS security-group scope.
- Authored the production scale-up plan for **~10,000 users,** gating always-on cost behind an explicit launch decision; uses Claude Code daily in the development loop.

Senior Mobile Developer

July 2025 – October 2025

Phoenix Digital Health Inc, Toronto, Ontario, Canada

Project: Phoenix & Raven Mobile App (Men and Women Health App) — React Native (TypeScript) — Sole Developer & Project Lead

Project Links: Phoenix App Store | Phoenix Play Store | Raven App Store | Raven Play Store

- Sole engineer on a greenfield Turborepo + pnpm monorepo, taking two production apps — Phoenix and its women's health counterpart, Raven — from **zero to both app stores in three months**, using Cursor to sustain that pace.
- Architected the monorepo so both apps shared utilities, types, and API/service layers across web and mobile, letting the second app ship off the same codebase rather than as a separate build.
- Implemented core product flows (profile, order history and status, new order and re-order), Stream Chat messaging between patients, doctors, and support, plus push notifications via expo-notifications.
- Owned release engineering end to end: EAS Build, EAS Update (OTA), environment configuration, GitHub Actions workflows for repeatable builds, and Datadog for production monitoring.

Senior Software Developer (Mobile)

June 2021 – July 2025

Apply Digital, Toronto, Ontario, Canada

Project: NFL App (Official) — React Native (TypeScript)

Project Links: App Store | Play Store

- Shipped fan-facing features in the official NFL app, which serves over **5 million weekly active users** in season, working inside a large React Native monorepo with GitHub Copilot in the workflow.
- Replaced on-device image storage with an image caching layer, cutting storage footprint and improving media load times across list and detail screens.
- Reduced codebase size by eliminating redundancy across shared modules and improved load time with lazy loading on heavier screens.
- Held the quality bar through PR reviews, enforcing TypeScript standards and reusable component patterns, and mentored developers.

Project: Disney — StudioOne (Internal Dashboarding iPad App) — SwiftUI & React Native (TypeScript) — Project Lead

- Led a mobile **team of five** delivering an iPad-first dashboard used internally to review production statistics through data visualization and reporting.
- Owned delivery end to end: milestone planning, work breakdown, dependency coordination, and architecture decisions.

Project: GatherApp (Fintech — Trading & Subscriptions) — React Native (TypeScript) — Project Lead

Links: App Store | Play Store

- Led a team of five building a React Native trading app, owning delivery across product features and subscription/payment flows to client handover.
- Established the core foundations - networking and auth layers, reusable hooks and providers, standardized data flow over **REST** and **GraphQL** - and introduced image caching.

Mobile Developer - React-Native

September 2019 – June 2021

Myant Inc, Etobicoke, Ontario, Canada

Project: Skiin Health (Wearable Health — BLE + GraphQL) — React Native (JavaScript)

Links: App Store | Play Store

- Built the React Native app's BLE communication layer using GATT command/response patterns, handling pairing, connection lifecycle, and background/foreground transitions against wearable firmware.
- Synced ECG, heart-rate, and activity data to backend services over GraphQL, keeping the UI responsive during updates.
- Owned release execution via TestFlight and Firebase App Distribution, monitoring crash trends in Sentry and shipping stability fixes across versions.

Project: SkiinHeat / Delilah (Internal Release) — Native iOS (SwiftUI, Combine, CoreBluetooth)

- Developed a native iOS app to control a smart textile via **CoreBluetooth**, including discovery and command pipelines with structured async handling and **XCTest** coverage.
- Built a proprietary **Swift Package** encapsulating BLE discovery + communication to reduce duplication and increase reuse.

Frontend Developer

August 2019 – September 2019

My Insurance Broker, Richmond Hill, Ontario, Canada
Project: My Insurance Broker website

Website Link: WebApp Link

- Built and maintained customer-facing experiences using **React**, including quote flows for home and auto insurance.

Web & iOS Developer Intern

December 2018 – August 2019

Boost Marketing and Media, Toronto, Ontario, Canada

- Developed web features using **React/Redux** and worked with phpMyAdmin-backed systems.

Fullstack Developer

June 2015 – August 2017

Web Ignito, Mumbai, Maharashtra, India

- Built full-stack LAMP web applications with REST APIs, delivering features, admin tooling, QA cycles, and deployments across multiple client projects.

EDUCATION & CERTIFICATIONS

Anthropic Certifications Completed May 2026

Building with the Claude API · Model Context Protocol · Agent Skills · Claude Code in Action · Claude 101

Mobile Application Design and Development Graduated 2019
Lambton College, Toronto ON

Bachelor of Commerce Graduated 2015
Sacred Heart College (Thiruvalluvar University), Tamil Nadu, India
